

Task 1 (SQL):

- i. Customers who have any order that was created within the last 24 months.

```
SELECT DISTINCT  
c.CustomerID, c.Name, c.Region, c.Industry  
FROM Customer c  
LEFT JOIN Order o ON c.CustomerID = o.CustomerID  
WHERE o.CreatedDateTime >= DATEADD(Month, -24,  
GETDATE());
```

- ii. Identify all products that have never been sold.

```
SELECT  
p.ProductID, p.ProductName, p.Category, o.OrderID, o.OrderItemID  
FROM Product p  
LEFT JOIN OrderItem o ON p.ProductID = o.ProductID  
WHERE o.ProductID IS NULL;
```

Task 2 (Requirements Gathering): Stakeholder : Europe

List 5 key questions you would ask the stakeholders:

1. How are leads are getting handled or qualifying before becoming the main lead ?
2. What are the data fields or format are important for quotes or orders ?
3. How taxes are affecting the quotes ?
4. How discounting is working with taxes for quotes (discount percentages fixed by regions or what ?)
5. What kind of integration between systems that stakeholders or business team is expecting ?
6. What main points are existing in manual process while creating orders or quotes ?

Functional Requirements :

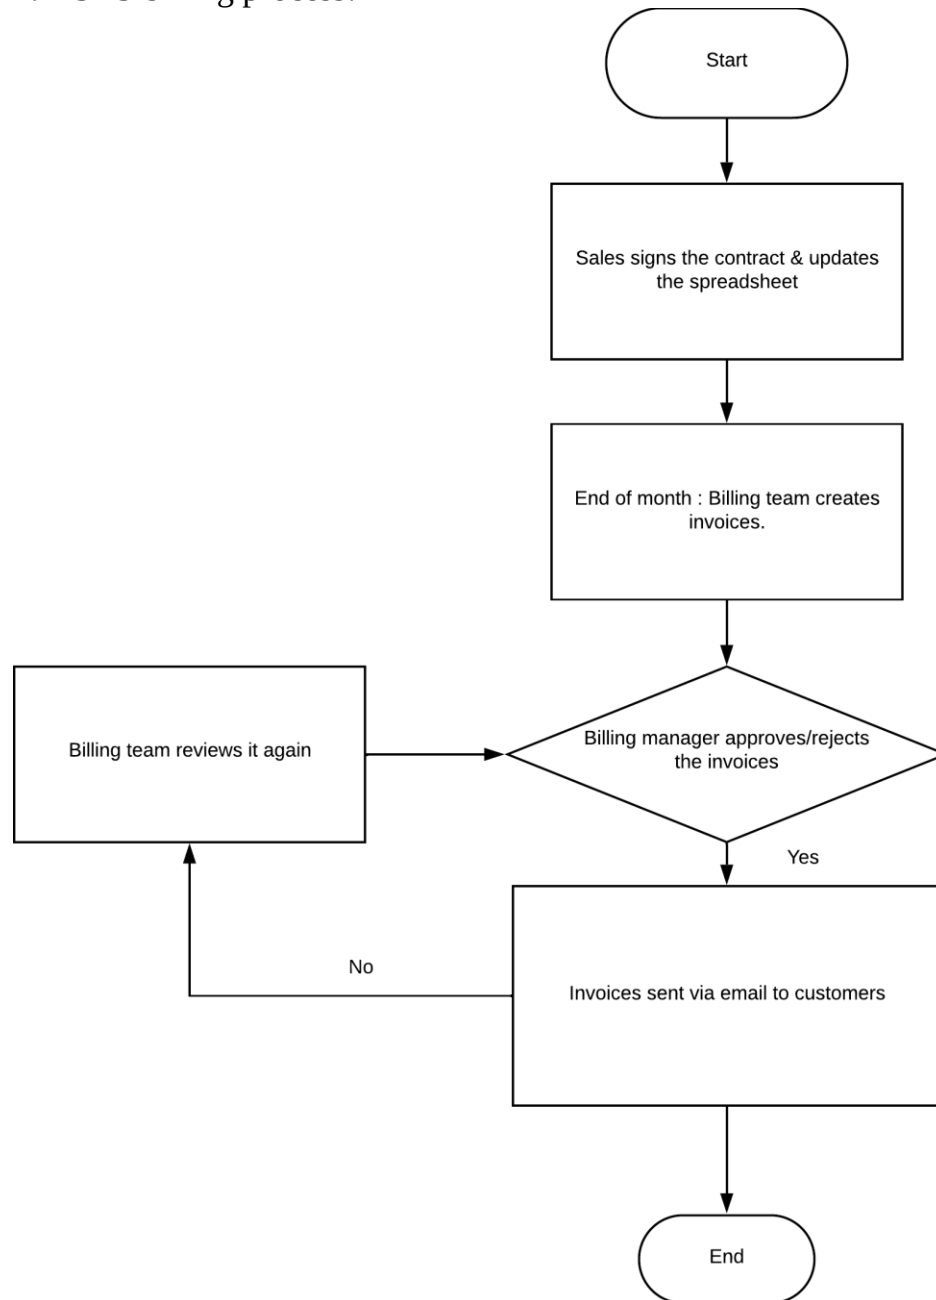

1. Integration between systems for quote to order automation.
2. Automated calculation for taxes or discounts during quote generation.
 - Handling region wise pricing structure.
3. Tracking the reports or orders with rates.

Non-Functional requirements:

1. Integration should have <5-7 seconds for orders.
2. High availability or stable connection between CRM and ERP.
3. Implementing Unified map for taxes and discounts based on regions.

Task 3 (Process Mapping): APAC.

1. AS-IS billing process:

2. Major Pain points:

- i. Manual Work : Needs to do manual entry causing human errors or delays.
Impacting incorrect data or mismatch data.
- ii. Lack of tracking : Sometimes spread sheet gets complicated to monitor status or to handle the data.
Impacting more customer experice / customer data confusion.

3. Solutions:

- i. Implementing Integration to auto generate invoices.
- ii. Having stable dashboard workflow

Task 4 (Gap Analysis):

What the gap is?	Why it matters	Solution	Priority
No system integration between CRM & ERP	Delays and duplicate data.	Implementing integration between CRM & ERP	High
Manual Work	Impacting incorrect data or mismatch data. Causing human erros.	Auto generate invoices	High
Complicated tax rules	Inconsistent billing	Implementing Unified map for taxes and discounts based on regions.	High
Dashboard Workflow	Impacting customer data	Tracking down the data.	Medium

Task 5 (Feature Design):

1. Renewal Feature Proposal points:

Description:

Automated Salesforce feature to trigger renewal opportunity before quarter ends ensuring the business security for the next quarter (90/91 days).

Key fields:

1. Contract (Start and end date + Renewal date)
2. Renewal Status (Start + Pending + Closed with the following dates)
3. Renewal Amount.
4. Managers (from dependent teams.)
5. Calculation for next quarter (90/91 days).

Rules and Automation's:

1. Workflow to auto-create Renewal Contract.
2. Reminders to dependent team managers (Via Email or Texts).
3. Auto calculated Renewal Amount for the upcoming quarter.

User stories:

1. Managers (from dependent teams.) : Managers should be notified when a contract is nearing to expire so they can initiate the renewals.
2. Finance team : Auto calculated Renewal Amount for accurate cash-flow.
3. HOD (Head of Departments from Finance teams or other teams) : To approve the renewal amounts.

2. Email Draft:

Subject : Proposal for automated renewal quarter feature in Salesforce.

Hello Team,

To improve revenue security and operational workflow, I propose implementing an Automated Renewal Feature in Salesforce.

This feature will add points:

1. Auto-generated renewal opportunity for every quarter (90/91 days).
2. Notify the dependent managers before renewal contract period ends.
3. Auto-calculate the renewal amounts.

This points will help us to stabilize the process on global scale and we would never miss the renewal period.

Please review the proposal and share your feedback.

Thanks & Regards
Geetanjali Dhoke.
Business Data Analyst.
